

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

- The part that was easy to understand it's the element to set the attribute of the image, title and the author of the book.

2. What parts of encapsulating your logic were hard?

- The most hardest part were to import the the books I the whole document

3. Is abstracting the book preview a good or bad idea? Why?

- On my side it is a good idea because the abstraction it to simplify entities to a core set of properties to understand the object of the code
