

# DWA\_03.5 Knowledge Check\_DWA3.2

---

1. User story(ies) in Gherkin syntax for the "+" button.

- Gherkin is a language used to write acceptance tests for software. It is a business-readable domain-specific language that lets you describe software behavior without detailing how that behavior is implemented. And also it should be able to add a new Item.

---

2. User story(ies) in Gherkin syntax for the "-" button.

- Gherkin is a simple yet effective syntax for describing the specifics of your User Stories. It's the perfect framework for writing user stories because it gives a consistent approach for reviewing all scenarios, defines the definition of Done, and provides crisp acceptance criteria.
  - When a user is trying to log in with an invalid credentials the login button should give an error message.
-
