DWA_04.3 Knowledge Check_DWA4

---

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

- Use meaningful names for variables and functions. This makes it easier for other developers to understand your code. For example, instead of using "x" as a variable name, use something more descriptive like "numberOfGuests".

- Use single quotes for strings. This is a convention that makes it easier to read code. For example, instead of using double quotes like "Hello World", use single quotes like 'Hello World'.

- Use arrow functions instead of function expressions. Arrow functions are more concise and easier to read than function expressions. For example, instead of writing `function(x) { return x + 1; }`, you can write `(x) => x + 1;`

---

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

- parameter syntax- I found it difficult to breakdown the code function of parameter syntax, It confuses in the declaration function when gives the value undefined.
- Array sort- It does also give me hard time to sort the values of the arrays.
